

**IN THE CLAIMS:**

Please amend the claims to read as follows:

1. - 44. (canceled)

45. (currently amended) A method for preparing an ester from a conjugated diene ~~compound~~component selected from the group consisting of myrcene, isoprene, and mixtures thereof, the method comprising:

providing a solution containing at least one alkanolic acid of the formula  $R_1CO_2H$  wherein  $R_1$  is a  $C_1$  to  $C_7$  alkyl group and having a  $K_a$  relative to water of less than  $10^{-4}$ ; and a base having a formula  $(R_2CO_2)_M$  wherein  $R_2$  is  $C_1$  to  $C_7$  alkyl,  $M$  is a group I cation and  $R_2$  can be the same or different than  $R_1$

heating the solution to a temperature in excess of 100 °C; and

adding the conjugated diene ~~compound~~component to the solution to form a reaction mixture free of catalysts while maintaining said alkanolic acid in a molar concentration greater than that of the conjugated diene ~~compound~~component, to produce an ester derivative of the conjugated diene ~~compound~~component.

46. (currently amended) The method of claim 45, wherein the conjugated diene ~~compound~~component is myrcene.

47. (currently amended) The method of claim 45, wherein the conjugated diene ~~compound~~component is isoprene.

48. (previously presented) The method of claim 47, wherein the alkanolic acid is acetic acid.

49. (currently amended) The method of claim 45, wherein the conjugated diene ~~compound~~component is added to the liquid reaction mixture in a dropwise fashion.

50. (previously presented) The method of claim 45, wherein the solution comprises a mixture of alkanolic acids.

51. (currently amended) The method of claim 50, wherein the mixture of alkanolic acids includes acetic acid and the conjugated diene ~~compound~~component includes myrcene.

52. (previously presented) The method of claim 51, wherein the mixture of alkanolic acids further includes an acid selected from the group consisting of butyric acid, isobutyric acid, and combinations thereof.

53. (previously presented) The method of claim 52, wherein the solution further comprises a non-basic organic co-solvent selected from the group consisting of methylbenzene, butyl ether, chlorobenzene, 1,4-dimethylbenzene, methoxybenzene, cyclohexanone, butyl acetate and mixtures thereof.

54. (canceled)

55. (currently amended) The method of claim ~~54~~ 45, wherein the base is selected from the group consisting of sodium acetate, potassium acetate and sodium propionate.

56. (previously presented) The method of claim 45, comprising conducting the reaction in a pressurized vessel.

57. (currently amended) The method of claim 56, wherein the reaction mixture is maintained at a temperature in a range of about 115 °C to about 175 °C during and after the adding of the conjugated diene ~~compound~~ component.

58. (currently amended) The method of claim 57, wherein the temperature is in a range of about 135 °C to about 145 °C and the conjugated diene ~~compound~~ component is myrcene.

59. (previously presented) The method of claim 45, wherein  $R_1CO_2H$  is selected from the group consisting of acetic acid, propionic acid, butyric acid, isobutyric acid, isovaleric acid and mixtures thereof.

60. (previously presented) The method of claim 45, wherein said solution further comprises a non-basic organic co-solvent.

61. (previously presented) The method of claim 60, wherein the non-basic organic co-solvent is selected from the group consisting of ethyl acetate, isopropyl acetate, 2-butanone, methylbenzene and mixtures thereof.

62. (currently amended) The method of claim 61, wherein the conjugated diene-~~compound~~ component is isoprene.

63. (previously presented) A method for preparing geranyl and neryl esters from myrcene, comprising:

providing a solution comprising

a mixture of alkanolic acids comprising acetic acid and a one or more additional alkanolic acids selected from the group consisting of propionic acid, butyric acid, isobutyric acid, isovaleric acid and mixtures thereof,

a non-basic organic co-solvent selected from the group consisting of methylbenzene, butyl ether, chlorobenzene, 1,4-dimethylbenzene, methoxybenzene, cyclohexanone, butyl acetate and mixtures thereof, and

a base selected from the group consisting of sodium acetate, potassium acetate, sodium propionate, and mixtures thereof;

heating the solution in a pressurized vessel to a temperature in excess of 100 °C; and

adding the myrcene to the alkanolic acids in a dropwise fashion to form a reaction mixture free of catalysts while maintaining said alkanolic acids in a molar concentration greater than that of the myrcene, to produce a geranyl ester/neryl ester mixture.

64. (previously presented) A method for preparing a prenyl ester from isoprene, comprising:

providing a solution comprising

an alkanolic acid comprising acetic acid and optionally one or more additional alkanolic acids of the formula  $R_1CO_2H$  wherein  $R_1$  is a  $C_1$  to  $C_7$  alkyl group and having a  $K_a$  relative to water of less than  $10^{-4}$ ,

a non-basic organic co-solvent selected from the group consisting of methylbenzene, ethyl acetate, isopropyl acetate, 2-butanone, and mixtures thereof, and

a base selected from the group consisting of sodium acetate, potassium acetate, sodium propionate, and mixtures thereof;

heating the solution in a pressurized vessel to a temperature in excess of 100 °C; and

adding the isoprene to the alkanolic acid in a dropwise fashion to form a reaction mixture free of catalysts while maintaining said alkanolic acid in a molar concentration greater than that of the isoprene, to produce a prenyl ester.

65. (new) The method of claim 45, comprising adding the conjugated diene component to the solution prior to heating the solution.
